

Practica Devsecops

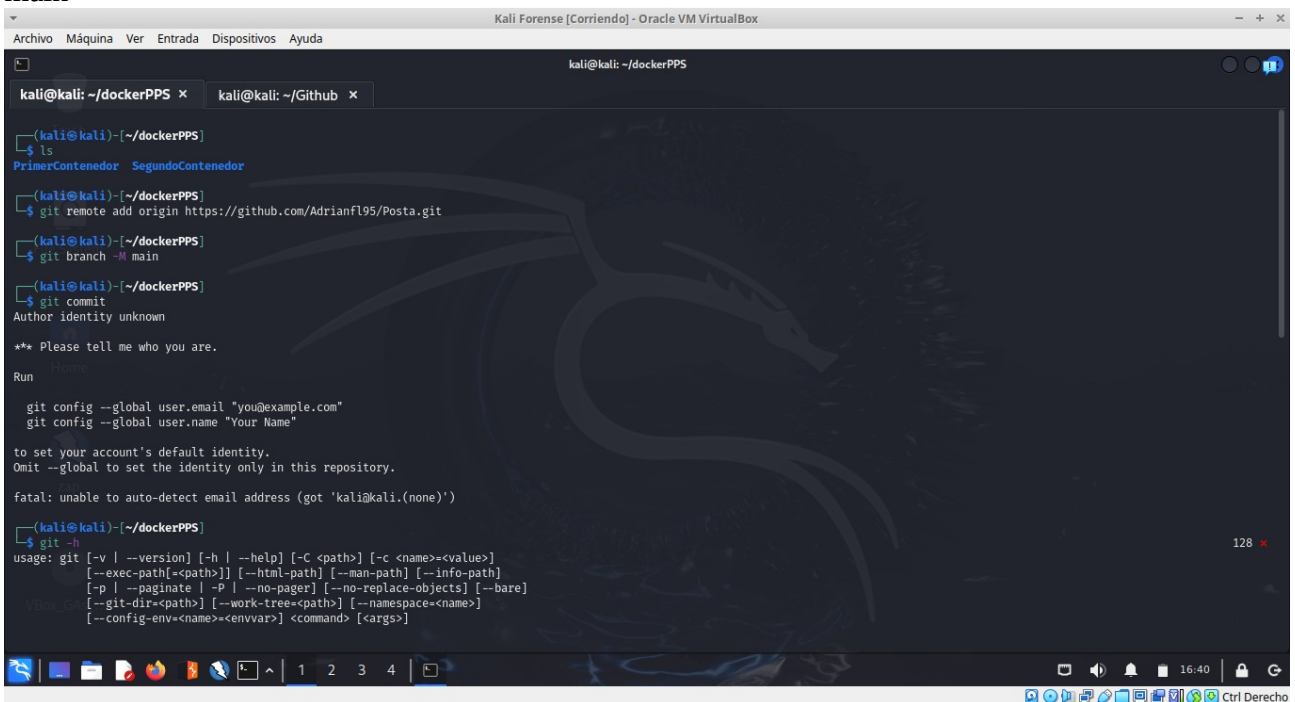

1. iniciamos un directorio local para el trabajo con git init

The screenshot shows a terminal window titled "kali@kali: ~/dockerPPS". The user has run the command `git init`. The terminal output displays several hints from Git, including the default branch name 'master' and instructions on how to configure the initial branch name. The final output is "Initialized empty Git repository in /home/kali/dockerPPS/.git/". The terminal background features a Kali Linux dragon logo.

```
kali@kali: ~/dockerPPS
$ git init
hint: Using 'master' as the name for the initial branch. This default branch name
hint: is subject to change. To configure the initial branch name to use in all
hint: of your new repositories, which will suppress this warning, call:
hint:
hint:   git config --global init.defaultBranch <name>
hint:
hint: Names commonly chosen instead of 'master' are 'main', 'trunk' and
hint: 'development'. The just-created branch can be renamed via this command:
hint:
hint:   git branch -m <name>
Initialized empty Git repository in /home/kali/dockerPPS/.git/
```

2. añadimos el directorio remoto en donde subiremos los cambios y creamos una rama local llamada main

The screenshot shows a terminal window titled "kali@kali: ~/dockerPPS". The user has run the command `git remote add origin https://github.com/Adrianf195/Posta.git`. The terminal output displays the command and the resulting message "git remote add origin https://github.com/Adrianf195/Posta.git". The terminal background features a Kali Linux dragon logo.

```
kali@kali: ~/dockerPPS
$ git remote add origin https://github.com/Adrianf195/Posta.git
git remote add origin https://github.com/Adrianf195/Posta.git
```

3. añadimos nuestro correo electronico

```
Kali Forense [Corriendo] - Oracle VM VirtualBox
Archivo  Máquina  Ver  Entrada  Dispositivos  Ayuda

kali@kali: ~/dockerPPS
kali@kali: ~/Github

examine the history and state (see also: git help revisions)
bisect      Use binary search to find the commit that introduced a bug
diff        Show changes between commits, commit and working tree, etc
grep        Print lines matching a pattern
log          Show commit logs
show         Show various types of objects
status      Show the working tree status

grow, mark and tweak your common history
branch      List, create, or delete branches
commit      Record changes to the repository
merge       Join two or more development histories together
rebase      Reapply commits on top of another base tip
reset       Reset current HEAD to the specified state
switch      Switch branches
tag          Create, list, delete or verify a tag object signed with GPG

collaborate (see also: git help workflows)
fetch       Download objects and refs from another repository
pull        Fetch from and integrate with another repository or a local branch
push        Update remote refs along with associated objects

'git help -a' and 'git help -g' list available subcommands and some
concept guides. See 'git help <command>' or 'git help <concept>'
to read about a specific subcommand or concept.
See 'git help git' for an overview of the system.

(kali@kali)~/dockerPPS
$ git config --global user.email megadark8@hotmail.com
(kali@kali)~/dockerPPS
$ git config --global user.name
(kali@kali)~/dockerPPS
$

Edit personal access token (classic)

Make sure to copy your token now as you will not be able to see it again.

ghp_a11TYTsizvJj0fnKhG8LqYbVI1NbBr3Zz3N9

Note

segundo_Token

What's this token for?

Expiration

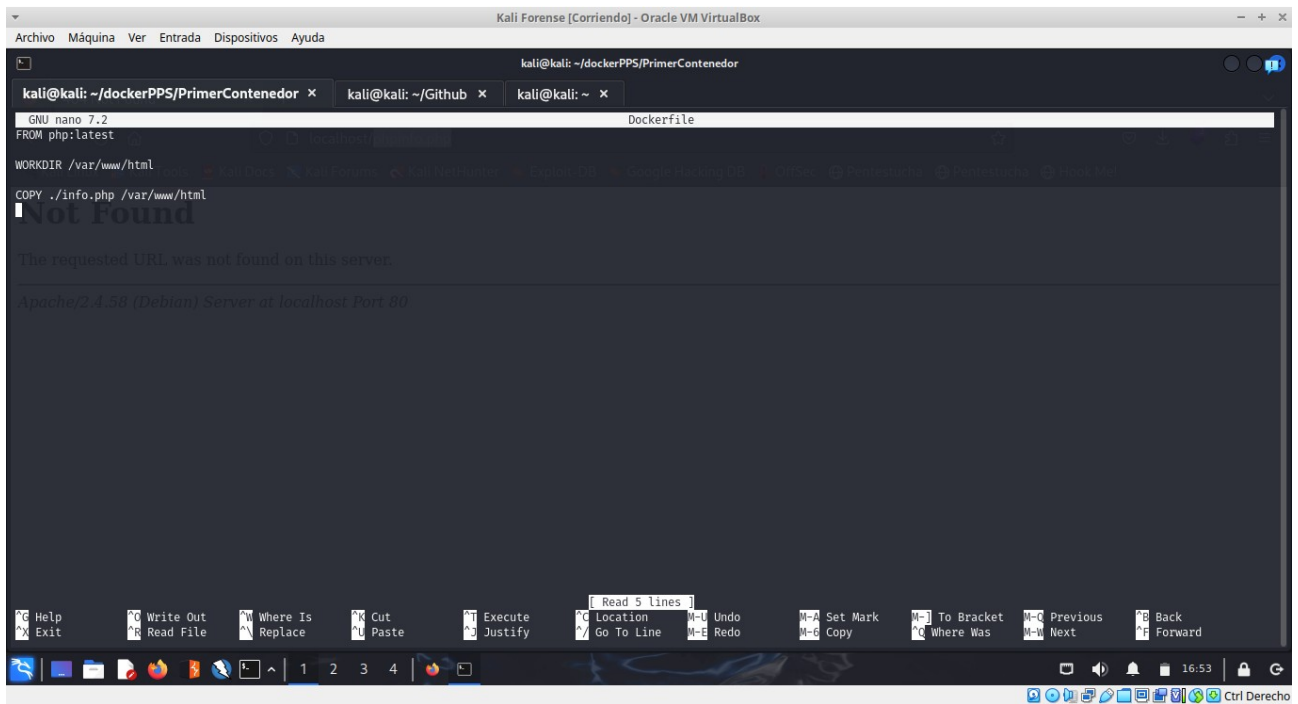

This token expires on *Sun, Jun 9 2024*. To set a new expiration date, you must [regenerate the token](#).

Select scopes

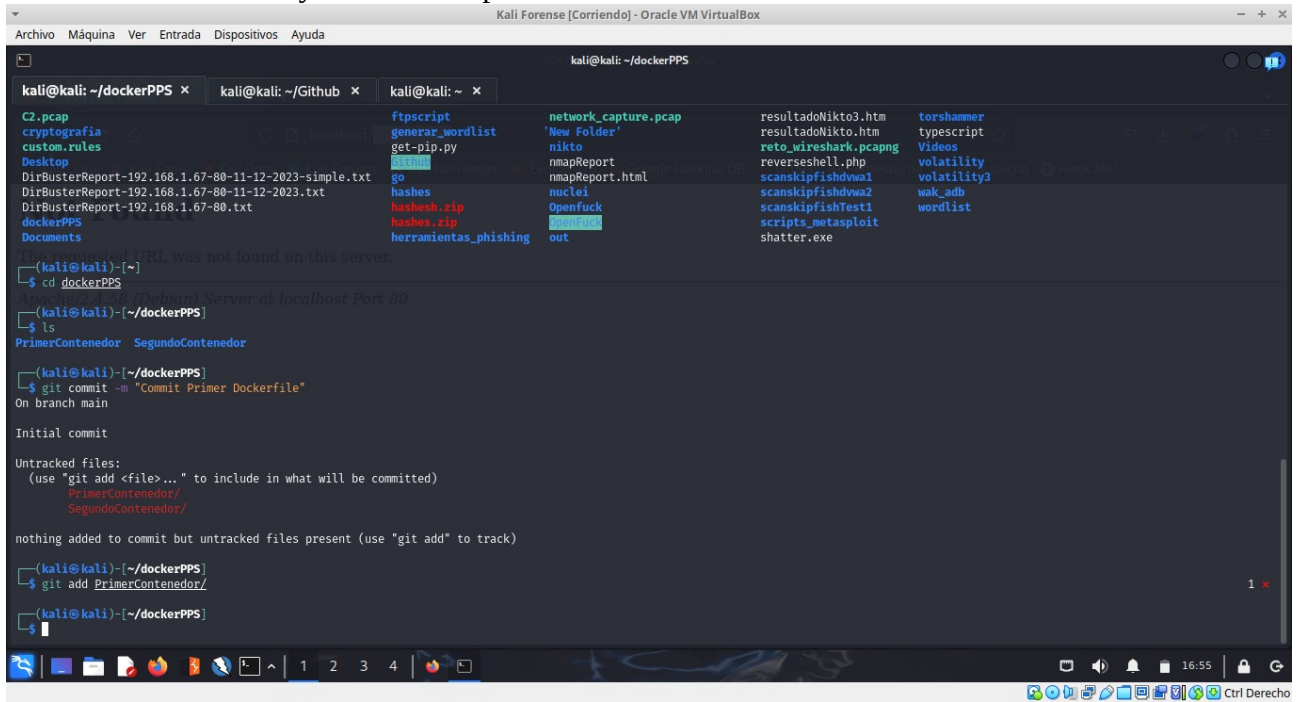

Scopes define the access for personal tokens. [Read more about OAuth scopes.](#)

<input checked="" type="checkbox"/> repo	Full control of private repositories
<input checked="" type="checkbox"/> repo:status	Access commit status
<input checked="" type="checkbox"/> repo_deployment	Access deployment status

5. Primer archivo dockerfile para copiar el archivo php

6. creamos un commit y hacemos un push

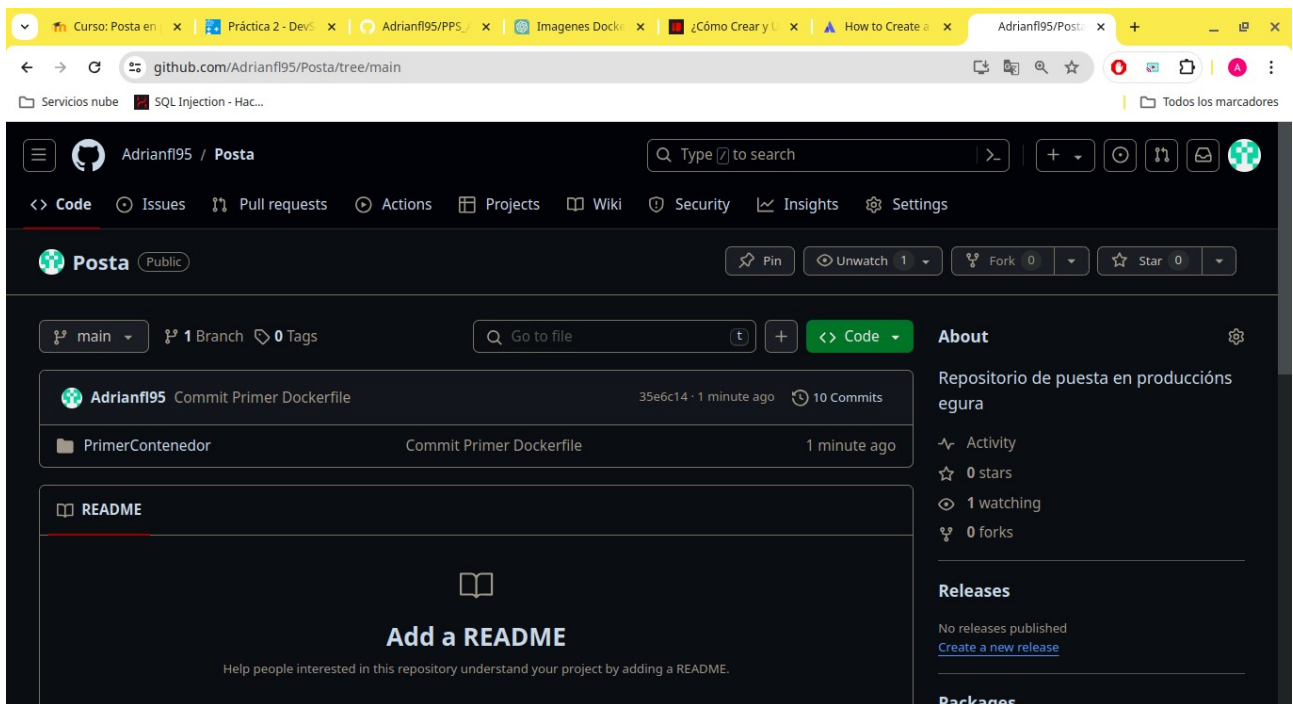

7. Continuación del anterior apartado

```
kali@kali: ~/dockerPPS
$ cd dockerPPS
$ ls
PrimerContenedor SegundoContenedor
$ git commit -m "Commit Primer Dockerfile"
On branch main
Initial commit
Untracked files:
  (use "git add <file>..." to include in what will be committed)
  PrimerContenedor/
  SegundoContenedor/
nothing added to commit but untracked files present (use "git add" to track)
$ git add PrimerContenedor/
$ git commit -m "Commit Primer Dockerfile"
[main (root-commit) 5e3d225] Commit Primer Dockerfile
2 files changed, 8 insertions(+)
create mode 100644 PrimerContenedor/Dockerfile
create mode 100755 PrimerContenedor/info.php
```

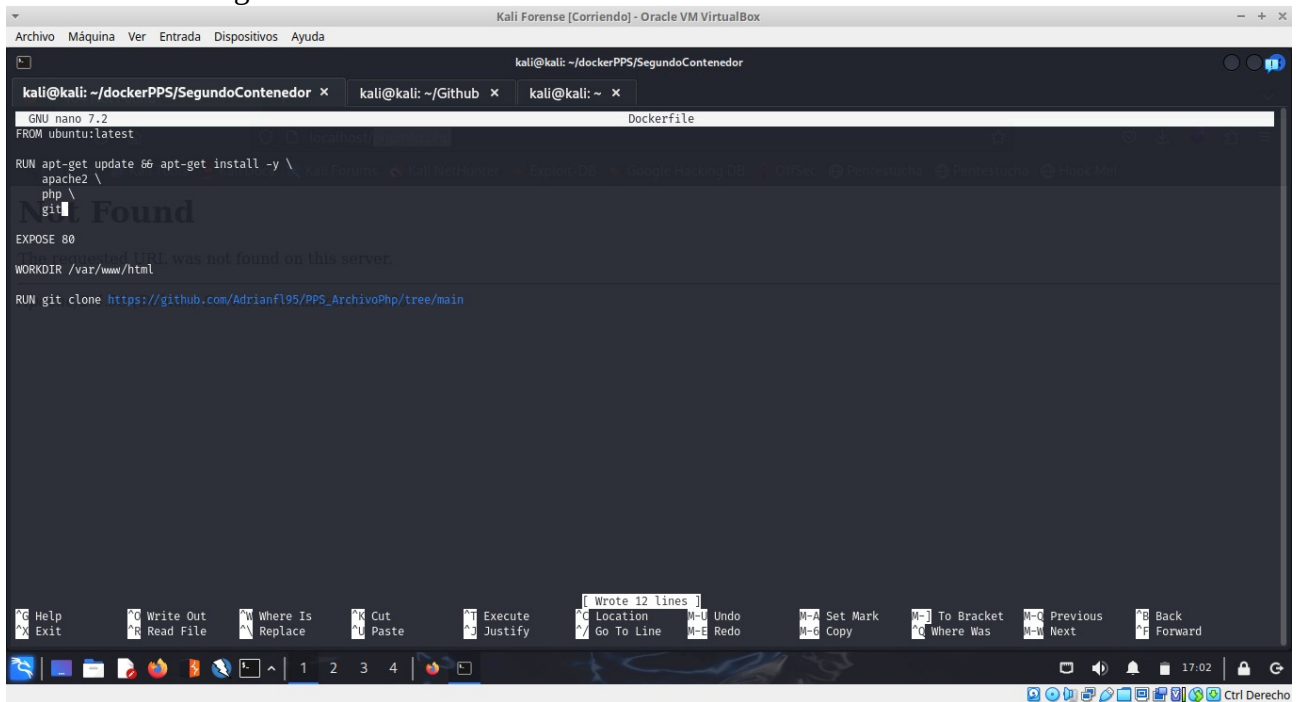

8. hacemos el push

```
kali@kali: ~/dockerPPS
$ git pull origin main --rebase
From https://github.com/Adrianf195/Posta
* branch      main       -> FETCH_HEAD
Successfully rebased and updated refs/heads/main.
$ git push -u origin main
Username for 'https://github.com': Adrianf195
